

# Shisha Pipe

UK

## METHOD STATEMENT FOR PREPARING ELECTRONIC SHISHA PIPES FOR SMOKING.

1. Fill the glass base with water to  $\frac{3}{4}$  full
2. Place the shaft (pipe) into the glass base making sure that the rubber seal is made. Use a screw method to tightly fit the pipe with the rubber grommet to the glass base.
3. Carefully lift the shaft approx 5mm from the floor making sure that the glass base does not come off. Make sure you have the other hand on the glass base just in case the fitting is not correct.
4. Place the stainless tray on the top of the pipe. This is for decoration only.
5. Place the hose with rubber grommet into the side of the pipe. Make sure it is a tight fit.
6. Place your thumb over the top of the shisha pipe (where the electronic patented device fits) and suck on the mouth piece of the hose to make sure that no air is entering the system.
7. Prepare your electronic device with the electronic flavour to your customer requires.
8. Place the already prepared electronic bowl with the rubber bowl grommet onto the shisha pipe top stem.
9. Use the hose and start to draw the smoke using a sucking method.
10. After 3 or 4 times the smoke should appear in the glass bowl.
11. Take the shisha pipe to customer and place on a firm area, either floor or table.
12. Give the customer / customer's mouth tip / tips for the end of the shisha hose.
13. Inform the customer to contact you if you need any help in moving or refill the e-flavour.

All works will be carried out to the latest health and safety guidelines, will all Shisha Pipe assistants adhering to correct training procedures using the latest applicable PPE etc at all times.
